

## About: Civil Service Employees Pension Fund

Civil Service Employees Pension Fund (CSEPF) is a governmental organization that provides Retirement Pension Fund for Civil Servants in Oman.

### Business Solution

- Civil Service Employees Pension Fund (CSEPF) IT Management needed improvement in following IT Service Management Areas:
- Need to enhance employee service response time for its IT Help Desk.
- Improve accountability and visibility of IT Service and Support.
- Improve Quality of IT Service by reducing repeat Incidents using a pro-active approach.
- Develop Knowledge base based upon problem solving experience.
- Protect Services while making changes - minimize the business risk.
- Align support staff performance with customer satisfaction goals.

### Project Goals

**The primary business problems that CSEPF was hoping to address with implementation of IT Service Management Solution included:**

**GOAL1** - Need to establish an Automated IT Service Management System:

CSEPFs previous Help Desk system was excel driven and was to be replaced. They were looking for a Help Desk system that can support implementation of ITIL V3 industry best practices and help resolve the other problems faced by IT. The additional requirement for CSEPF was the need for system to be totally multi-lingual application in English & non Latin languages like Arabic as well, so that the new system can get easily adapted with the growing national workforce.

**GOAL2** - Centralized view to manage work:

CESEP was not having good visibility for all of the kinds of work coming related to helpdesk. Each support staff used to receive incidents and tracks work separately, which made it nearly impossible to tell exactly, what work is going on in the IT Department by looking in any one single database.

### **GOAL3** - Reduce service downtime:

Because CSEPF have not yet implemented a formal change management process, there was no visibility for changes in the environment, which in turn made the problem Troubleshooting difficult. This had increased downtime frequency and duration for incident management.

### **GOAL4** - Manage IT Assets including configuration and inventory management:

CSEPF's hardware and software environments became complex every year after year. They needed to document the inter-dependencies between hardware, software's in order to do a more effective job managing new changes in the environment. They also needed a tool to track user desktop configurations.

## **Solution**

Using SMART Service Desk IT Service Management, CSEPF started implementation of ITIL V3 Framework best practices for improving IT operations and quality of service delivery. ITIL® which is accepted and implemented in Europe, USA is the only consistent and comprehensive documentation of best practices for IT Service Management, used by thousands of private & governmental organizations worldwide.

The IT management of CSEPF believed the introduction of an ITIL based Help Desk system will enhance quality of IT services, Improve IT organizational efficiency and reduced cost by leveraging efficiencies to improve productivity of IT staff & infrastructure resources.

## Benefits Realization upon implementation SMART Service Desk ITSM

- Self Service eliminated redundant work.
